SLAT SYSTEM INSTRUCTIONS

Assembling the Slat System

Start by feeding the slats through the spine and then placing on the cleats attached to the side rails once bed has been assembled like pictures below.

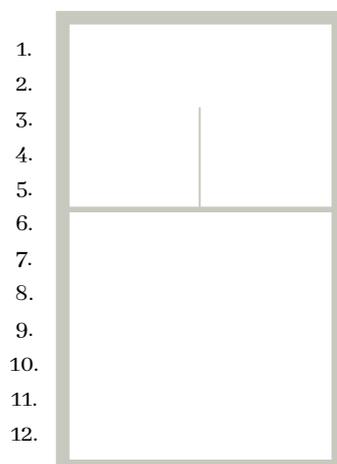

Positioning the Support Tube

Double Bed - Place the Support Tubes between 6 and 7.

Queen Bed - Place one Support Tube between 4 and 5, and the second Support Tube between 6 and 7.

Super King and King Bed - Place one Support Tube between 2 and 3, the Second Tube between 5 and 6 and the third Tube between 8 and 9.

Bed Head

Foot End

Assembling the Tube into the Spine

Start by feeding the Tube through the Spine until it is centred.

Put the small bolt through the end tab and screw into the end of the Tube. Tighten with the Alan Key. Once both end tabs are attached to the Tube, make sure both sides are even on each side of the Spine as pictured.

Important Information

- The reason we provide and recommend the use of the Support Tubes, is to help the slats stop bowing excessively. Extra Support Tubes are available for purchase upon request.
- For a Double bed you will receive 1 Support Tube, for a Queen bed you will receive 2 Support Tubes and for a King and Super King bed you will receive 3 Support Tubes. We recommend flipping the slats every 12 months to avoid any cracking!
